Feeding duration varies depending on the pathology and on the regenerative ability of the hepatic tissue.

Lifetime feeding may be necessary in case of chronic disease. In order to reduce the postprandial hepatic load, it is recommended to divide the recommended daily intake into several small meals.

For the mixed feeding table please see the end of the section Gastrointestinal Tract.

LIVER DISEASE

RECOMMENDED FOR CASES OF

- Chronic hepatitis
- Portosystemic shunt
- Hepatic encephalopathy
- Copper storage disease

NOT RECOMMENDED IN CASE OF

- Pancreatitis or history of pancreatitis
- Hyperlipidemia
- Acute hepatitis without hepatic encephalopathy¹
- Growth, gestation/lactation

¹ In this case the recommended products are Gastrointestinal or Recovery.

ADAPTED PROTEIN CONTENT

Adapted levels of high quality proteins to support liver function in case of chronic liver insufficiency.

LOW COPPER

Low level of copper to help minimize its accumulation in liver cells.

HIGH ENERGY

A high energy content to reduce meal volume and decrease intestinal load.
