Urinary S/O Moderate Calorie is a complete dietetic feed for dogs, formulated to dissolve struvite stones and reducing their recurrence through its urine acidifying properties, its low level of magnesium and its restricted level of protein but of high quality.

RECOMMENDATIONS: It is recommended that a veterinarian's opinion be sought before use. Feed Urinary S/O Moderate Calorie for 5 to 12 weeks for the dissolution of struvite stones and up to 6 months for the reduction of struvite stone recurrence. Then the dog should be re-evaluated regularly by the veterinarian to assess the relevance of a life long recommendation. Water should be available at all times.

IN OLDER DOGS: renal function should be checked before Urinary S/O Moderate Calorie is advised. It is recommended to divide the daily intake into 2 meals.

LOWER URINARY TRACT DISEASE

RECOMMENDED FOR DOGS WITH TENDENCY TO BE OVERWEIGHT IN CASES OF

- Struvite uroliths: dissolution and management of recurrence
- Calcium oxalate uroliths: management of recurrence
- Bacterial cystitis: management of secondary struvite crystalluria (in association with adequate antibiotherapy)

NOT RECOMMENDED IN CASE OF

- Chronic Kidney Disease (CKD)
- Heart disease (when sodium restriction is sought)
- Concurrent use of urine-acidifying drugs
- Growth, gestation/lactation

STRUVITE DISSOLUTION

Helps dissolve all types of struvite stones.

MODERATE CALORIE

Moderate calorie content to help maintain ideal weight.

URINE DILUTION

Urine dilution makes the urine less liable to form struvite and calcium oxalate stones.

LOW RSS

Helps lower the concentration of ions contributing to crystal formation.

S/O® INDEX This product creates an unfavorable environment to creation of oxalate and struvite uroliths in the urine.
