ADULT CAT

Renal diets are recommended as soon as creatinine goes out of reference range (from CKD late stage 2), before the disease further progresses, and before inappetence develops.

In case of food aversion, the cat can be switched to another renal option without transition. On top of renal blood panel, mineral blood panel follow up may be recommended: in case hypercalcemia develops, the cat should be switched to Early Renal diet; other mineral disturbances (eg. hypokaliemia) may require additional treatment.

In most cases, Renal diets may be continued for the cat's lifetime.

KIDNEY DISEASE

RECOMMENDED FOR CASES OF

- Azotemic Chronic Kidney Disease (IRIS late stage 2 to stage 4)
- Management of calcium oxalate urolith recurrence in cats with impaired renal function
- Prevention of recurrence of urolithiasis requiring urine alkalinisation: urate & cystine uroliths

NOT RECOMMENDED IN CASE OF

- Growth, gestation/lactation

RENAL SUPPORT

Formulated with low phosphorus and moderate protein of high quality to support renal function and improve the cat's quality of life.

ADAPTED ENERGY

Adapted energy content to reduce meal volume and help compensate for a decreased appetite.

AROMATIC CHOICE

A specific aromatic profile with a dedicated kibble shape to help stimulate the cat's appetite, particularly in cases of food aversion.
