ADULT DOG

Renal diets are recommended as soon as creatinine goes out of reference range (from CKD late stage 2), before the disease further progresses, and before inappetence develops. In case of food aversion, the dog can be switched to another renal option without transition. Renal diets may be continued for the dog's lifetime.

KIDNEY DISEASE

RECOMMENDED FOR CASES OF

- Azotemic Chronic Kidney Disease (IRIS late stage 2 to stage 4)
- Chronic Kidney Disease with proteinuria (IRIS stage 1 to 4)

NOT RECOMMENDED IN CASE OF

- Growth, gestation/lactation

RENAL SUPPORT

Formulated with low phosphorus and moderate protein of high quality to support renal function and improve the dog's quality of life.

ADAPTED ENERGY

Adapted energy content to reduce meal volume and help compensate for a decreased appetite.

AROMATIC CHOICE

A specific aromatic profile with a dedicated kibble shape to help stimulate the dog's appetite, particularly in cases of food aversion.
